Speaker 1: Now I get to talk about the good news. Dr. Garry Gordon, I cannot believe he's here. Garry is an icon in the world of international medicine because a lot of people fought him and he won. He's also an icon in the integrative world. There's almost nothing you can ask him that he won't know an answer to. He knows everybody. He flies around the world to every conference in every country.

A little bit of background is Garry was born as a very sick child. They didn't really think he was going to function and possibly not live. He went to medical school and at the age of 29 he collapsed on the floor of his office with a heart problem. Garry is now 79 years old which totally boggles my mind when I look at him. It was through all of that challenge to himself and all of the learning that he's done and the caring that he's done that he's going to bring to you, that he's able to function and look like he does today.

I'm going to tell you a little bit of his background now. Garry was the co-founder of the American College for Advancement in Medicine which probably most of you have heard of. That's quite a mind boggling accomplishment on its own. He's internationally recognized in anti-aging chelation therapy, detoxification and regenerative medicine. He's a walking example of all of that. He's co-authored several books, Detox With Oral Chelation and the Omega-3 Miracle.

He's going to tell you some stories that I said, "Garry, please record these somewhere," of how he's fought the different medical establishments and won because he had the facts. Garry is a true believer. He champions our cause to keep us healthy naturally. He's a gift and thank you so much for coming here, Garry. Garry, by the way is two R's. If you go to search him it's G-A-R-R, it's Gordon Research and the other company is Longevity Plus.

Dr. Gordon: Thank you.

Speaker 1: You're welcome. Let me make one more comment. The machine over there, what I'm going to ask people to do, they're going to be on it for three minutes. When they leave if we can start sort of this side of the room so there's not too much chaos and just let the wave go of people who want to sit on it. That's a gift. That's a \$24,000 machine you're getting a treatment from.

Dr. Gordon: If my machine is so good and if it has something to do with electrons, how come I have a red light? I'm not Rudolph the Red-Nosed Reindeer. I'm showing you that in China for years they've been working with the simple idea that lasers are when you get into quantum mechanics, they are pockets of protons and protons become electrons. On my website where I have hours and hours of training because I go to every meeting at least in the field of alternative medicine in this country and other countries. I try to give my 3,000 members of the forum on anti-aging and chelation a little update, but I cannot type that fast and you can't read that much.

Whatever you think, and I can tell you, in every country I have people come up and give me a hug because they feel they're a family when you believe and belong to fact.

I'm inviting all of you, you simply go to my website, you click on the word fact and you tell us who you are, pick out your own password and you will hear from me about three little messages a day to tell you things like Israel has an unusual treatment for brain cancer. They vaporize the brain tumor without any incision. You can go back to work the next day.

That's using focused ultrasound. If it's a fibroid we treat it and you go back to work the same day. It's vaporized and gone indirectly. In addition to that we know that if you happen to go to the Center for Regenerative Medicine, the McGowan Center, University of Pittsburgh, under Dr. [Batilick 04:06] and they've blown off your leg in Afghanistan and there's nothing is working and you won't let them amputate it, that stump, they regrew the guys entire quadricep. Front page, New York Times over three and a half years ago.

They did that with things that involve things you all believe in: cryptic peptides, which we get from the extracellular matrix of a pig's bladder. It turns on stem cells so rapidly that you don't need to go and fly anywhere and buy a stem cell. You need to learn what I'm sharing with you tonight. I want all of you to know that it was a mess, my health was a catastrophe. I couldn't go up a flight of steps in medical school without going into heart failure.

After I was practicing a few years to have to collapse and wind up eventually finding my way to Mount Zion Hospital here in San Francisco where I took radiology residency. Then after a year I decided to walk away from it because I didn't see what we were doing as productive. I could have made a lot of money. Radiology is a great business, but I have to be satisfied that I'm doing good.

You need to know that we also have a little place called Harvard Medical School with Dr. DePinto who is now the head of MD Anderson. Took and strained what none of you guys have probably really heard. He made an aged blind mouse that was diabetic, gray in hair, had no cells in his testicles, it was within a week of death and made it young again.

Trouble with that, use Google and say Harvard, aged, mouse, dead. I'm here to tell you that whatever you think you know, I'm here to challenge you because fats make you live longer. The higher your cholesterol, the longer you live. Statins are poison. They give you diabetes, they give you cancer. Everything that you think you know is not quite the way you thought it was.

Because I've had to rebuild my body I've rebuilt my knees, I was born with no stomach acid. I couldn't take pills and absorb any. I had the lowest levels of magnesium. I became a world expert on trace minerals because I had the highest levels of mercury and the lowest levels of magnesium. I'm sitting here tonight telling you that detox is what I do. I can't detox people without teaching you about energy. Of course the time of dinosaurs the earth presumably had between 20 and 30 Gauss.

Today you're about .5. if you move to Mars how long do you think you're going to stay alive? You don't make it folks for more than a day without a magnetic field. What I'm just trying to educate you is that there's lots of ways of combining energy and nutrition. I have wound up working with this company and having them set up a system where anybody who uses my name instead of paying \$499 pays \$450 and is told that if they'll sign the piece of paper after 60 days that it didn't help them at all, they'll get 80% of that money back. In other words they're going to lose 100 bucks.

What's the benefit? Well, I have a whole webinar on intranasal laser where we have people with MS start to function, we have patients that were ready to go to the nursing home who now are driving their car. How could electrons have that much power? It's all part of the picture. Energy medicine, if you're going to get into it, energy medicine is going to take you in the field of microcurrent and magnets. Now I have doctors who lease these for \$500 a month for their practice and it's able about to go up to 19,000 Gauss. That's way beyond what we need.

We all like results tomorrow. Fifty years ago they proved that this would heal your broken bone when three or four years of idiot surgeons never healed you at all. If it can heal a broken bone when nothing else worked, what is it doing? Well, I had literature, and some of you, there's a little literature left, to tell you how it works. It does turn on stem cells. It's kind of expensive. Doctors pay 24,000 when they buy it with all the attachments so they can treat the autistic child and put this on the child's head and tell the child you're now a space captain.

The child gives you eye contact in less than three to six minutes when there's been no eye contact. We have YouTube with a child at age 18 you couldn't put two words together, that the school was informed the parents the day we treated him that he would be living in some kind of special assistance the rest of his life because he never had put two words together. After we treated him 12 times with this magnet that we're going to let you all experience, he wound up giving a lecture on neural transmitters and he now dates young ladies. He's not the cripple that we were told that he was. I have people living in a wheelchair for 8 years with Guillain Barre.

All of this is on YouTube. It's not hard to check me out. You put in my name, G-A-R-R-Y Gordon and you see a lot. On my website I try to give you an idea. You click up here for media and that will take you to webinars where I talk about vitamin C and talk about how we can have your friend not die if they visit the hospital. Because today hospital acquired antibiotic resistant infections are now the fourth leading cause of death. People go to visit some loved person, so we do have one addition to this makes it steroplex and that's what the hospitals are buying from us.

We'll have that available for you soon for individual consumers because it's obviously ... Because in the hospital we have to spray the whole hospital. For you and I all I do is I take 15 or 20 sprays and I hold it in my teeth and flush it morning and night and I don't have a contribution of bad guys from my mouth into my cardiovascular system.

Statins technically are reported to reduce cardiovascular events 20%. Brushing your teeth twice a day reduces cardiovascular events 40%. Your mouth is a cesspool. I'm just teaching you that all these things that we want you to understand can have a life changing event. Since I already feel terrible that people can't read and put pieces together, that may be my only forte, I am not original. Nothing I do is original. I just read.

When we realize that Otto Warburg said cancer always is happening to a cell that is anaerobic, low in ATP and has low membrane potential. That's pretty simple. He got a Nobel Prize for it. Why did he get sick? He said I always find toxins amazingly. Isn't that amazing? In this room if any of you took 20 tubes of your blood and sent it to Mount Sinai School of Medicine all of you would fail the test. No one has ever passed it. You come loaded with bisphenol A [inaudible 11:10] dioxins, PCBs, lead, mercury. You are all a cesspool.

If you're going to feel as good as I do at 79, I've been on oral chelation every day of my life for over 20 years. I make it really simple. I put the EDTA and the garlic and the [inaudible 11:28] and all my other tricks and I found the heparin-like substance out of iota carrageenan in the ocean. In the body the plant it's heparin. My patients don't embarrass me by dying. If they die they stop buying stuff. It's really bad for the economy.

You understand that where we're at is that we now have enough knowledge to be able to have you start to seriously think that at age 79 I may just be in the middle of my career. How many more careers am I going to have? Do you, any of you, deeply believe that this whole stuff about measuring telomeres has anything to it? Do you think it's all poppycock? Go to Ed Parks. He's a really nice doctor. He's well trained, Columbia, Harvard. Search his name. He has become a top guy on TA-65. That's not the only way to increase your telomers. Your vitamin D does it. Many things do it.

Specifically he will show you that he is using a product that came from Geron Corporation and a gentleman agreed to pay 100 million dollars for the right to sell that unique astralgulous derivative. They get \$4 a pill. That's a lot of money. I tell people you know, it may seem like a lot of money, but you know you really can't afford to die today. You have no idea what the government is going to do to your life when you're dead. They get their hands on it, they'll wreck the farms, they wreck everybody's life.

It's really your obligation to learn how to take care of yourself. If you start believing that I was a basket case for most of my life and now at this age I don't have that pain in my knees. I always had to take Betaine Hydrochloride for 10, 15 years because I have no stomach acid, but I've regenerated my body. Ten years ago I would read a page and I couldn't tell you what was on the page, so don't fear. I don't care what you think is your enemy. I haven't lost a patient to a heart attack or stroke in over 20 years that I'm aware of.

Maybe people are protecting me and they just don't call, but they keep ordering it so we think the guy is alive. It's the same way on our vitamin C. The leading cancer clinic, Dr. [inaudible 13:51], Clinic St. George, he tells you he couldn't practice cancer without our Bio-En'R-Gy C because he has patients that he thought wouldn't live two years of their life 10 years later still buying it.

When we have things that work, but you have to put it in a framework which is why I've handed out information to you today. There's no way Adrienne would love to have me tell you some of the stories of some of the amazing things that I've had, of children that were told they had to have emergency heart transplant and instead we just used our magic. A patient of mine who 25 years ago was told he'd be blind in a year with a rare disease and I'd never heard of [pigmatoid 14:30] glaucoma. Don said to me, "You've got my father's bladder cancer. It can't be that hard to save the eye."

I said, "Don, you have 1,000 employees. I don't know anything about your disease." He said, "Dr. Gordon, I can make it easy. I'm not going to do the surgery and I'm not going to do the drugs so you're stuck with me." I wound up becoming an expert at how to treat the eye, which is part of the brain which means I'm not fearful about any of you losing any of your brain power because I travel from country to country. In Northern Thailand we started studying a dietary product called [inaudible 15:05] which stands for miracle herb.

We've been studying it now for 14 years at the Chulalongkorn University with Dr. [inaudible 15:13] who's the head of the department. We have studies. It stops bone loss and increases bone production. We have the lowest incidences of breast cancer according to World Health Organization of many places on the earth. Amazingly enough for 1,000 years the monks always said he who eats of this food, it was a gourd, part of the staple in their diet, never develops dementia. Their brain power stays.

I had already lost my brain power. It came back, but I do a lot of stuff. It's not simple. I don't have good genes. When I do a simple lousy \$425 test with Smart DNA in Australia, doing \$425, 75 genes, 50 comebacks showing I have extraordinary need. I figured that on my own because by the time I got the tests back I knew I needed to omega-3 and [inaudible 16:01] and I knew I had lots of things. I also knew that I would never be able to be a long distance athlete and I had disabling hypoglycemia and lots of stuff. My father and my brother both have sudden cardiac death.

I kind of got involved in this field because I really had a few years the good Lord gave me. This is my guinea pig for me to work on. Some of the things I endorse these days have changed my life and I just have to share that information with you because so many people walk into a blind alley thinking nothing can help. How easy is cancer to treat?

Well, I was practicing here in the state of California and of course they had this rule that would put me in jail. They did put Jim Privitera in jail for treating cancer even though all his patients got remarkably well. I'm a coward so I wound having my

patients see me in Tijuana. Even though I'm practicing in Sacramento I flew back and forth and the patients had to see me there.

We knew that simple things like vitamin C and [inaudible 17:06] laetrile and these other crazy things would work virtually 100% of the time on far advanced prostate cancer. So easy to treat that that it's boring. Not that easy with all other cancers. Many of them are relatively easy, but today we have a laboratory in places like Korea and Germany and Greece that can take from your blood a test. They will find your cancer. It has been in your body for 7 or 8 years before you have a lump or bump.

When they tell you, "Oh you have to decide right away. You've got to quick do something. We just found cancer in your ..." Tell them it's hot air, to leave you alone. That cancer has been there for 7 or 8 years. You need your time to decide how you want to proceed, because cancer is a systemic disease. It is a metabolic disease. It's as metabolic as diabetes. Are you going to cut the patient's pancreas out because they've got diabetes? There's nothing to cut out, folks. It's a systemic disease.

They make so much money putting people into a state of shock. At the same time we ourselves, we assume that we're immortal. Most of us cheat a great deal. We've failed to walk the dog around the block and we don't get the sugar out. We don't do what we need to do. Interestingly enough we are able to do tests today because of the sophistication of where we are. When I got into thermography, I take a picture of your face and in less than 10 seconds I can say, "You are a stroke waiting to happen," because if this side is cold and this side is warm there's a block. This is nothing complicated.

When you tell somebody they're going to have a stroke it's a wake up call. They might chose to maybe smoke a little less, maybe walk a little further. Do something. You can do the same thing with the electrocardiography. We now have multi-focal electrocardiography by Premiere Heart. Dr. Shen in New York City has full approval of the American Heart Association, the College of Cardiology and FDA and even Medicare. It's covered. It's a \$300 test and they can have you for five minutes and tell you who is going to die in the next two years of a heart attack and who's perfectly clean.

I am now perfectly clean at 79. I have nothing in my tubes. That test is available just like we now have out of Purdue University a test that will find your tumor when it's only 2mm in size. It's called UncleBlot.com. With that test you don't have to have patients living with a lie that their surgeon says, "I think I got it all." You can't get it all. Why have people horns-waggled with nonsense. They find it. It's about 100% accurate.

If you want something that's even more, because they think the tumor has to be about 2mm in size. I used to be in the racket of radiology, you know I can't see your tumor there until it's ideally well over half a centimeter. Maybe, preferable a centimeter. That's pretty late. You've had that tumor for seven years. During that 7 years if I told you you had cancer you'd be amazed how many people can change their

diet and exercise and figure out what supplements would really help them and how to detox.

Because we did the 10 American Study. The 10 American Study took children at random selected across the country. At birth we said take that one, take that one. What did we do? We just took what is normally thrown in the wastebasket, the placenta and the cord blood and we sent it to a research lab and we paid \$13,000 for each child. What did we find? There isn't a child born in this country that isn't loaded with carcinogens, neurotoxins and endocrine disruptors. You know the names.

Polybrominated diphenyl ethers, dioxins, PCBs, [inaudible 20:54]. You understand it's in all of you. What are you going to do about it? There's no simple answer. I became an expert in one that is easy to study. Lead is not that hard to study because you can measure it on blood, urine and hair and it's not quite so expensive. That test I just mentioned, those 10 kids, we did a \$13,000 test each kid. Mount Sinai School of Medicine does a cheap one. It's only \$4,900. Then we do 200 instead of 300 chemical.

Who wants to spend that kind of money to be told you're loaded with bad stuff? If you don't believe it, you're not going to spend the time and effort to be a nut on detox as I have been. My life, something told me when I collapsed that day when I was 29 years of age and had to close my medical office, something told me that it was tied to things that are in our water, food and air. You call them toxins.

Lead is an easy one to study, mercury is, because mercury and lead come from the burning of coal. We burn coal to turn on the power around the world. The world is rapidly developing so there's a lot of power stations. The net result is we poison the entire oceans of the planet. Do you think you go out and take a nice breath of fresh air. You think that they can prove and they've published it that every breath of air that you get here in the San Francisco Bay Area, 30% of your mercury in your body is directly a gift of China.

We can tell that by radio isotope testing. We know what's in your body, but who cares? Well, it turns out that Claire Patterson of the California Institute of Technology is one of their top scientists who wanted to figure out when did we poison the planet? We went to the Arctic and the Antarctic and separately drove down, down and got that huge casing of ice and brought it up and measured how much lead and mercury was in that ice. When did it go in it?

It was the Industrial Age. Seven hundred years ago we decided to poison the planet. How much lead was in the bones of a child who died 700 years ago versus today? Pretty easy to do, it's easy to find. They have plenty of children die every day. There's lots of dead bones. So Cal Tech published the paper that the least number is the children today were 1,000 times, and that was about 15, 20 years ago.

Today it's more like 1,500 to 2,000 times the level of lead that was in the bones. I am an expert at trace minerals. I've had the largest laboratory in the world. I had offices in Asia, Europe. I'm an authority on this stuff. I sold my laboratories to doctors

[inaudible 23:42]. They do first class work. I can tell you the blood, urine and hair is to keep the doctor out of jail because you sound like a nut if you tell everybody that comes to you, "This patient is depressed. This patient has high blood pressure. This guy has got osteo ... This guy's getting recurrent ..."

You tell them all you want to get the lead out. Obviously you're a nutcase. What if it was all true? What if Harvard Medical School would do the courtesy for me to make me credible to publish in the journal of the AMA? A paper that says the level of lead in your bones determines what day you go blind. They publish that.

Of course doctors can't read this because they want to read the ads. It's too hard to read the science. If you read the science you'll see that what I'm telling you is that the chelation that I'm considered by many to be the father of EDTA chelation therapy, is able to grab the lead that's in your heart and kidneys and soft tissues and eyeball. There isn't a piece in your body that isn't loaded with stuff and we can measure it.

The real problem is it's hard to biopsy your bone and you don't want to go to the doctor and say, "Hey doc, take a piece of my bone. I want to see how much lead is in my bone." Harvard developed a radioactive source of lead so they can bombard your bone painlessly and tell you how much lead is in your bone. It's only a half million bucks. I'm sure we'll have one here tomorrow, right?

Well, no you're not because nobody cares. Just like nobody cares that in this room of people there is a lot of pathology that you don't know about. There's cytomegalic virus according to Harvard in 96% of you. Which tells you a little bit about why we had the discussion earlier on vitamin C, vitamin D, even itos A, even garlic, silver. Because we all do have these little problems.

Now Harvard says that cytomegalic virus is directly implicated in the plaque on your arteries and it directly leads to things like hypertension, so they're not saying it's good news. They're just saying they don't have an easy treatment for it. We have to make all of you very knowledgeable about how you can keep some balance. I came up with my Fight For Your Health Program.

The Fight For Your Health Program, apparently we've been able to pick up all the ones, is really based on this concept that if the cell is loaded with bad stuff, how can I get a, I use the word mouse, M-I-C-E, it stands for the magnet which is inducing cell extract. When he turns that magnet up his arms will start moving and he's not moving them.

The magnet is doing exercise so even if the patient is comatose I can still exercise him. Kind of gives me a lot of power. How does exercise make people live longer? It does it through the process that is called autophagy. I write all that and have handouts so you guys can sound really knowledgeable. Because autophagy, which is auto for self, phagy, eating, is the process by which I can really ...

The reason I'm kind of keeping it short tonight, and I had Adrienne play with it earlier today because she's already taking my detox formula which is an organic, green, special fiber, macca and vitamin C. She's protected because if I took any of you nice people, and I can tell you, Bob Roan is a good friend of mine. He lives 100% organically. He's 100% vegetarian. He thought I am a tough guy.

He turned on my machine when he bought it because he bought one for his 93 year old father. His father said, "You spent how much money? At my old age why would you spend that much money? Son, you must be crazy." Robert said, "Dad, if it doesn't help you we'll sell it used. No big deal." Two months later he said, "Dad, I've got a buyer for the machine." He says, "You can't have this. I don't have to get up at night to pee. I don't fall down anymore."

Robert bought the machine, but he didn't wait for me to tell him that this is a powerful machine. He played with it for an hour or two and the next day he said, "I don't know if I've run a 110 mile marathon," but he says, "I might be dying of the flu." He knew that he'd released more toxins than he dreamed he had in his body. This is the real world and yet we're not going to be able to have everybody learn how to ...

It seems like if it's right under your nose, you put this in somebody's nose and they can suddenly drive the car again and they don't get lost, that's too easy to be true, right? No one's going to believe it. That's why I got the company to agree to give 80% of your money back because if people didn't understand it's real they're never going to do this stuff.

Because I really like this whole concept of what we have, I told you that measuring the level of vitamin C in your urine allows you to be scientific. Find out because GNC sells, everybody sells vitamin C. You can get vitamin C for \$1. You can get one that is pretty expensive. How do you know you're not wasting your money? Well, very simple. If you take one dose and 12 hours later it's still showing a very bright spot, that means the chelinity is going on and toxins are leaving your body.

If you get stuck in traffic as we were trying to come here behind a bus and breathing lousy stuff, you want vitamin C leaving your body, capturing the bad stuff. That's not a hard thing to understand. If you can get a cheaper vitamin C that will keep you in a yellow color 24/7, that's the game. You know what? When you get up at 5:00 in the morning you want to still be totally perfected.

We tried to put science to it. As we play with this game what can I do to take care of the poor lady whose doctor means well? He's heard that vitamin C helps cancer. Otto Warburg said no, wait a minute. That cancer is so acid, it is so anaerobic, it has such low membrane potential that technically it doesn't pick up oxygen from the hemoglobin that's 1mm away in a capillary. None of that oxygen goes. If the oxygen doesn't decide to go in that cancer cell, why would the body be so smart as to put the vitamin C in that cancer cell?

Well, it's interesting. There's one reason. All cancer cells are sugar hogs. They're a huge sugar hog and it happens that vitamin C if you change just about one atom is to the body sugar. It's a Trojan horse. We fooled the cancer cell. It takes up the vitamin C. It doesn't take it up efficiently so I get mad because the people who have a tumor somewhere, because they have FDA, these machines are approved now around the world for everything from depression to brain cancer and for healing broken bones.

When my partner wound up breaking her pelvis they told her she had to be on bed rest for 3 months. She never used bed rest at all. She turned this machine on. We have pad that comes with it. Then she wrapped herself in the pad and just left it on 4 and 5 hours a day. She in 3 days was in the store shopping with a broken pelvis, whereas everybody else at the end of 3 months, they're on the walker. They're trying to move and they haven't gone to the bathroom because they gave them a bedpan for 3 months because they said you can't walk for 3 months. You're on total bed rest with a fractured pelvis.

It's good for you to know that this stuff has been around for a while. It's good to know that since we can't all afford something that complicated, what we have to know is that NASA has got that Skylab out there. They'd like to justify all the money it costs to have all this research going on in space. In Skylab they're doing experiments and they see every time they go through the aurora borealis tells you that there's a certain amount of magnetic activity over our poles, so when it goes over they saw the stem cell activity dramatically increase on Skylab.

NASA said we'd like to look like the good guys on this. Let's invest some money, let's see what we can do. They called in Dr. Dennis and he's a world famous scientist. He's a cellular biologist. They said we want to duplicate that. He said makes no sense to me. He was very resistant. He wound up developing this little device that runs for the average person a total of \$1,395. It runs on a cigarette pack so you plug in the battery. On this one I managed to leave it on so it's dead today. You won't be able to feel it. Sorry.

This allows you to see the size of the rings that I showed you that I put on the child with autism, that's a pretty good size ring. This goes to 19,000 Gauss. If you put the two of them back to back you can get 200 Gauss. That sounds like homeopathy. It's homeopathy if it works. Because I can tell you without a question that there are people today who are living on Vicodin with disabling back pain and all they had to do was buy a nice type of girdle that they could slide this under the girdle and turn on the ... Hook the battery thing around their neck and they are now not on any Vicodin.

It doesn't cure, but the pain is gone in most people after 10 or 15 minutes. I'm trying to get that one set up so there's a money back, because I'm tired of trying to explain to people this is all real. It's kind of neat to know that we live in a time frame that an old mouse treated at a place called Harvard that anybody can Google after 6 weeks of being on a tamoxifen related compound, which is a synthetic estrogen related treatment for women with breast cancer. Technically when you get into this kind of

stuff just like Haelan, different things that work in the endocrinology area, we call this a selective estrogen receptor modulated beta receptor, SERMB.

Harvard used a drug and after 6 weeks that mouse that had been gray and they had actually done a CAT Scan to prove that its brain was shrunk and almost nothing left and they sacrificed a bunch of them to prove there was no leydig cells, the testicle was devoid of activity, six weeks later this little mouse is busy copulating and it has babies. It has got brown hair.

You may want to sit there and think about what you want to do with your life. Because you see I feel sorry when Warren Buffet gives away half his money to Bill Gates because he assumed that he's at the end of his career. Because he doesn't know what I'm teaching you tonight. I'm teaching you tonight that Bill Andrews is a true scientists with 45 patents after his name.

He runs Sierra Sciences in Reno. He was the top scientist at Geron when they formed TA-65. I said it's astragalus extract and it's \$4 a pill. It's not going to work dramatically for everybody, but one bright doctor has 28 hours of YouTube information because he puts it on YouTube after he gets 3 cases of cure. Three cases of [inaudible 35:13], three cases of multiple sclerosis, three cases of brain cancer then he puts it on. He's got 28 hours. It looks like he thinks he's getting some win with the astragalus related compound that does nothing but make your telomers longer.

Who cares how long they are? It totally relates to how many doublings are still left in your body. You see, the minute the egg met the sperm you had about 15,000 possible doublings. You use 5,000 of those doublings just to come out as a screaming brat baby. You come out and you've only got 10,000 chances left. When you get to be 70 you have less than 5,000.

If you send your blood for \$700 to Spain to the LifeLength.com which is run by Dr. Blackburn who got a Nobel Prize for this work, it turns out that you'll have an idea if your days are numbered. Nobody wants to know their days are numbered unless you thought there was some answers. Maybe vitamin D. Maybe getting the lead out. Maybe some of what Dr. Gordon is doing works. Maybe you're going to wind up making a new appraisal of what are your priorities in life.

The old car might work for another 5 years. We may not remodel now. If your priority was to have you feeling as good as you should feel, because when I knew Linus Pauling he was 91, 92 and I knew I wanted to be like him when I grew up. I knew I couldn't do it without learning things from him. As I said I couldn't take more than 1,000mg of C. With no stomach acid everything tore me up and I'd be in the bathroom with diarrhea and cramps.

I spent the time to make a vitamin C that meets the needs of my colleagues and friends. That kind of opened the door to start looking at more things. Bill Andrews who's with Sierra Sciences said he has got very fancy equipment that he can check

molecules to find out where's the next TA-65. If we have one, don't you think for \$4 a pill somebody else is going to make one?

He's found 3 more candidates. I need a billionaire because nothing is legal without a billion dollars worth of work today. Even though I have some that are much stronger than the existing one, the existing one ain't all too bad. I have a friend who specializes in doing stem cell treatments from your bone. He drills into your femur and gets some bone marrow.

He often will give you a drug for a while to populate because if you're an old guy like me, 79, those cells are getting kind of sluggish and there's not a huge mud of healthy stem cells in my bones. He found some of his patients that he warned, he said, "You guys are nearly 80. I don't like to take \$10,000 of your money because I don't get that good of a result." They said, "We're going to do it."

He drilled into these guys and both of them had a very high per cellular bone marrow. It turned out they had been taking TA-65. When he gave them the stem cells the old guy who had been sitting on the couch for 3 years winds up opening up a business and coming back. I'm just trying to stretch your imaginations to think if you really believe that 79 is the new 45 that would be quite astonishing to what kind of decisions you'd make about what you're doing with your life.

You would probably get kind of fussy about walking away from a field that wasn't that exciting to you. You see, my work isn't work for me. Obviously it's a hobby. Because I love what I do obviously it's going to make me stay young. I'm just trying to titillate your imagination because the slides, I've shown you guys slides and I've been here before. I'm going to just go really fast because this was the 10 Children Study.

We all know how much pollution is going on. All of you know that wheat isn't safe. You all know genetically modified food is killing you. You're all hearing too much about Fukushima. Having been in radiology I'm not that concerned about the Fukushima, but you need to understand that drug resistant bacteria, that's got my attention. This is a frontline study. You need to know that you should wind up with an emergency kit at your house. No one should have a bottle of ... Fail to have vitamin C in the house so when somebody who's visiting you gets sick you don't have to go up in the middle of the night to try to find really good C that they can take in huge doses.

My contribution was to make something by mouth that would work very much like intravenous. Then if they happen to learn that I can treat with this magnet, I can go from one side of your head to the other side. It does a lot of stuff. Not everybody is going to have access to the big toy, but the big toy is documented with YouTubes all over. You go to my website and you click on energy, then there will be a [inaudible 40:10] explaining how many people are just playing with a stupid laser that they stick in their nose while they're driving the car for 25 minutes.

It turns itself off. They're winding up helped through the process which I learned years ago. I've been into laser for along time, that if I took a nursing home and the

little old ladies and talked to the staff and there's nobody home. They're in the bed, nothing happening. I put a really good laser on the bottom of the foot for about 10, 20 minutes.

We have a company in Colorado called Aurora and they wind up for about \$4,000 with a device, it's about the size of a business card, so when you put it on the foot your giving laser information. In less than 2 weeks of doing that twice a day those people who had never talked to the staff are talking. Kind of interesting. You could get into lots of theories, is it mediated through nitric oxide? It's like the problem we have with my working with chelation.

I had to sue the AMA, the Medical Society in Sacramento, the California Medical Association and then later separately I had to sue the Medical Board of California. Why did I have to do all that suing? Because they were bound and determined to stop Dr. Gordon because what Dr. Gordon is teaching is going to go across this country and we have to stop him. That's fact. We got that in discovery.

I don't get put down easily. I lost both my cases at the lower court where they sleep in bed with the same people as the judges, but when you go up on appeal they don't control those judges. They're not sleeping with them. The judges on appeal of both cases, my case against the Medical Board, because the Medical Board saw to it, they broke into my office to get the list of every doctor in the state and they said, "You keep chelating, we're taking your licenses." It's been a bit of a fight.

I don't get put down easily because I wrote the protocol that had chelated approximately 10 million people and those 10 million people, they know who I am. Because I can prove their foot is warm, their eye has circulation again, their memory came back. I can prove that. We did get NIH reluctantly. I actually had to trick them, but they wound up spending 31 million dollars to try to put me out of business because they were sure that my stuff was quackery. If we did a really good study it would be the end of Gordon and there's no more chelation.

Sorry for them. We came back with a 37% decrease in cardiovascular events and they had to publish it in the journal of the AMA. They apologized. They said we never wanted to put this study in [inaudible 42:49]. Mayo Clinic says we don't care what you say. We're going to keep operating, we need the money. They didn't make it that blunt. They said we don't care what the research shows. It was a multi-center study, no one can attack it. It proved one thing, all of you just like my mom when I was a kid used to tell me to get the lead out. I was a very sick kid. She didn't know how right she was.

Because I was so sick I wound up with some incompetent dentist telling my father that all that mercury in my mouth hadn't been put in the right way and he was going to take out all that mercury and put in all brand new mercury so I'd have all nice new mercury. For a year I had narcolepsy. I was unconscious for a year. I couldn't raise my head off the bed. I'm telling you I've had a few experiences and as I said, that led to

my winding up becoming the director of a laboratory. Wound up to my getting into chelation, doing things like that.

It's all come together to the point today that we really know that we can do things like I say to you. What house wouldn't have a bottle that retails for \$49 that one fourth of this bottle is an ounce and an ounce is enough to take many people who are going to be dead in the morning. It's published in the New York Times 3 weeks ago that if you have a nasty infection silver makes the antibiotic work about 1,000 times more effectively.

What's 1,000 times between friends? Let's certainly not expect the hospital to have the silver inside because we're just lucky that the FDA decides not to seize all the companies. This thing about infections, if you learn my food infection genetics heavy metal home owner doctrine, that's what the fight stands for. The F is for food that's killing you and all of you are eating a food that's not working well with you. Folks, it is not just the gluten. It's the Map 5 and you'll learn more about that later.

We have leaky gut thanks to a wonderful company called Monsanto that decided that if everybody had pesticide in your food that maybe they were going to get a corner on the seed market. The net result is that BT kills insects by tearing up their guts. When we introduced genetically modified food one year later we doubled the instance of childhood asthma and things have been downhill straight from there.

They can lie because they have enough money to buy, as you know, we have the best Congress that money can buy. In any event oxidated stress is big story because if we think about it we have to realize people like New Skin have done a great job and a lot of people have [inaudible 45:37]. We've really pushed the story of antioxidant. I've handed out literature here that I made it the kingpin of antioxidant.

If you really like antioxidant, intravenous glutathione, if you go on Google and put in IV glutathione plus Parkinson's you'll see that my friend Dr. David Perlmutter, neurologist in Florida, has the patient who couldn't talk and had to walk like that with a walker for years, in one shot of glutathione in his vein and 15 minutes later he was walking with no help and he's speaking clearly.

Antioxidants are useful. Does that mean they cure cancer? There's never been a study showing antioxidants cure cancer, but I happen to be on the Board of the International Oxidated Medicine Association and we're going to try to have all of you become knowledgeable about how you burn the trash. If there's a lot of leaves on the front lawn you don't want an antioxidant. You want to combust them. You'd like to have a bonfire. We've been saying little things like there's bad stuff in your body, I'll give you a scary number.

A really neat guy, Dr. Black at Dartmouth did a study years ago, published it that at age 50 what is really wrong with dead bodies. He decided to cut the dead bodies open and look. Takes a lot of time and money and patience. At age 50 38% of all the

women's body already have breast cancer. At age 50 certainly 50% of the men have prostate cancer. 60% when you're 60, 70% when you're 70.

How many people had a stressed out thyroid gland that under the microscope was called cancer? About 96% of all people at age 50 had cancer of the thyroid. I'm up here today to try to take you into a different way of thinking about this beast. The beast is if I measure you and hook you up to a mask and I put you on an exercise bike and I measure how much oxygen I give you and how much CO₂ you put out, would that allow me to know how efficiently you convert your oxygen? Your oxygen utilization?

Well, you'll be interested to know that nobody has ever come in and had cancer that has efficient oxygen utilization. Remember my background is in trace minerals and I told you that I had the lowest levels of magnesium. It's difficult. I developed the exo-test which is in Portland, Oregon. It's a test where we take the bottom of your tongue and just put a few cells on the slide and then we get an electron microscope. We find one or two cells and then we take an x-ray for us.

It just cost me 3, 400,000. You look at a single cell and you measure how much calcium and magnesium inside of the cell. I have to tell you, not one of you can pass that test. Why? Well, think about it. If you learn a little physiology, cells have 10,000 times more calcium outside of the cell than inside. That's a pump that's working pretty hard. If pumps are working hard do you think they're going to be working a little less hard if you are living on dioxins and PCBs and lead and mercury? Just maybe you are setting the stage as Warburg said, all cancer starts with toxins which is why I'm now Dr. Detox.

I have had to add to my detox knowledge the knowledge of what a pulsed electromagnetic field can do. I can't have every doctor expecting to have the room to want to spend \$500 a month, but my horse has his own PMF because my horse does the Grand Prix jumping. He does the 7 foot and he earns much more money than I do because he's on my zeolite, he's on my vitamin C and he has his treatments 3 times a week. It's all legal.

Anybody can become a real athlete. I am an absolute basket case without the machine. I carry this machine on the airplane when I'm in Brazil and when I'm in Monaco and when I'm in Taiwan. My baby is with me because it's totally legal, but it changed my life because I wasn't utilizing. It's on my website what I actually take every day.

We've mentioned several things here today. We've mentioned to you that we have a power drink. Now we didn't bring enough literature for all of it, but this is pretty simple. Gordon Research Institute doesn't sell you anything so I can give you literature. Gordon Research has the literature that I'm showing you and we're giving you a few pieces to tease you and titillate your imagination.

On my website the FDA will not allow us to tell you where you can buy any of the products. You guys can cheat and learn the name LongevityPlus.com and you can

know where the things that I talk about because I mention HRT and vitamin C, silver, but you've got to know where to get it. The thing is I've tried to do an \$80,000 study to prove that not all vitamin C is created alike.

We proved that uniquely our vitamin C goes inside of the cell. I said that cell has got an problem going. It's got the calcium. It's got to keep pumping the calcium out and it gets tired. Listen, when anybody has a heart attack, anybody, if you are lucky enough to own your own hospital that patient is going to get magnesium. Anybody who's sick you're going to give them ...

The chief of anesthesia at Kaiser [inaudible 51:00] has never had a death giving anesthesia in 30 years. He gives every patient a couple grams of magnesium when he puts them to sleep because he doesn't want deaths on the table. Of course that won't be legal anymore because that's going to spend \$3 of Medicare money, so you can't have magnesium because we have to have a test.

Why did I spend a million and a half dollars of my friend's money to develop exo test? Because there was no perfect test. I can get a hint from the piece of hair. If it's not magnesium, it's a pretty good suggestion. From serum and from 24 hour urine. I can do it different ways. I'm just trying to tell you that we live in this new age of Obamacare in which the best doctors are not able to pay their office rent and their staff based on third party reimbursement.

It's getting to be frightening. My good doctors are all looking into concierge medicine and having to charge you 300, \$500 a month so they can keep the doors open. Then they will still be able to be your doctor. All of the good things that we're talking to you about are not going to be part of the clinic care that this country needs if we don't want to go bankrupt.

I want to make sure that all of you pick up my card and understand that my website, Gordon Research is there. We cover autism and we cover Lyme. There isn't anything we don't cover. I started to talk about oxygen utilization. What do you think, if you look at a pilot light underneath the hot water burner, and if it's all yellow you know that pilot light is juts not hot. It's not. Or on your stove.

Needs the eyes. It's got to be a hot blue flame. My job is to make all of you into a hot blue flame. Since I told you that at age 50 about 96% of you have a stressed out thyroid that under a microscope has experts saying that's cancer in that thyroid gland. How many of you actually would be healthier if you had the ability to get the thyroid I take each day even though my normal T3, T4 TSH are all completely normal?

I'm an expert at this stuff and I can tell you that tests that we do to people today have often totally misleading ... In other words Dr. [inaudible 53:12] it's very high. It means you don't utilize it and you really needed it. It's so complicated. Doctors are really not able to keep up with this and that's one of the reasons I'm happy to appear here because you guys are willing to take your time to learn all this and share this knowledge with your friends and we really can do some amazing things.

Because when you realize that magnesium and thyroid are tricks that start getting that hot blue flame and so we're now talking about going in a backdoor to a different idea. I was just in Budapest where we have baths where people are put in the bath for actually an hour and out for two hours then in for an hour and out ... They do that for three weeks. The get three hours of baths a day in the Kaqun water.

That's really a play on words because it's K-A-Q-U-N.com if you're trying to find Budapest. He based it on the Cocoon movie in America. Because he takes terminal patients and he's figured out how to make water carry oxygen. I figured out how to make water carry hydrogen. We kind of bonded. Robert Lyon and I, he was over here in American giving a talk and I told him, "Robert, I've been able to get micro-bubbles of hydrogen out of water and I can do this to people. By adding my zeolite I now can do what glutathione does largely with the oral, affordable thing that you can take morning and night to detox your body and lower the level of reactive oxygen species." Which means there's going to be less lipid pro-oxidation.

Which means T-bars and eight [inaudible 54:54] levels are ... I'm a genius. You're going to live much longer. Wait, if you don't once in a while think to carry the trash out maybe it isn't too smart to have no choir at all. Because without reactive oxygen species there is no metabolism. When are you guys going to take the time to get a oxidative therapy? Do you think breathing in a hyperbaric is oxidative? No. It's oxygenation. It is not oxidative. It's a shame the words are so close because it's fooled a lot of people.

I have a pad too of the \$110,000 nautilus chambers in my practice. I've put people in hyperbaric like the one that Micheal was busy using before he managed to kill himself. The chambers actually do magic. If you have somebody who has a black leg or has a stroke this afternoon you bring them to my office and I put them in that chamber. We will not lose any of that brain function. It's amazing.

It is not oxidation. Oxidation is what you do when you learn about ozone. Ozone is so widely practiced in Russia that it's in every facility. Because I'm a member of the International Ozone ... Remember I don't live just in America. I'm on the plane all the time. Yes.

Speaker 3: Dr, Gordon.

Dr. Gordon: Yes.

Speaker 3: I know you said you like to take questions.

Dr. Gordon: Yes, thank you.

Speaker 3: You said about 10, 15 minutes.

Dr. Gordon: Let's do the question and answer right now. Thank you. This is a great time. We've had a chance to give you a little flavor of some ideas to talk about. Ozone is my passion today is to have you know that we wind up having people buy their own ozone generators and we'll have more and more people learning how to do rectal ozone or ozone bath or ozone saunas or ozone ...

Because we're going to get to be really smart and one day we're going to know who needs to burn the trash and who needs to stop the fires. With that who would like to be ... Here's the microphone for you.

Speaker 4: Monsanto soaks all their seeds in Round-Up. If you go on YouTube and you look up Dr. Barry he'll tell you all about Round-Up. It's one of the most evil things ever invented.

Speaker 3: Any questions?

Speaker 5: Yes, there is a question. Dr. Gordon [inaudible 57:20]. All of people asked what the PMF [inaudible 57:25] is doing for them physiologically. You can go on that level, spiritual, whatever.

Dr. Gordon: PMF, if you pick up the literature and I had a lot of literature, it's going to reduce pain and inflammation in everybody, increase range of motion, increase circulation, improve degenerative nerve and tissue, recover better [inaudible 57:46] develop stem cells and it's going to bring a cell back to optimal functioning. The PMF is absolutely in my mind, I suggest it to you that the level of magnetic energy going through your body which comes from the central molten iron in the center of the earth is now at .5. That's a 95% reduction from what it was at the time of dinosaurs. Don't worry about dinosaurs coming back. You can't have dinosaurs without 20 and 30 Gauss.

You're safe, but there's a little problem. The reason Mars is still a dead planet is it has no magnetic field at all. Of course the magnet field is what helps keep our ozone shield to protect us from getting fried. It's not nice that we've lost so much of the magnetic field. The PEMF, there isn't a condition known where if you think that increasing circulation, increasing uptake of nutrients, increasing the ability to get the toxins out. I brought these sheets here because I'm really very upset that if you change the word and just use what I did, I have up here electronutrient therapy. Magnet inducing cell excise. Advanced detect.

Why am I so upset? Because if you go to Google and you put in the word electroporation plus cancer, you'll find that by the simple addition of a little physics cancer therapies that are working 15% of the time start working 60% of the time. That's only 400% better by simple learning one word tonight. I'm moving you beyond electroporation, which was a bit of invasive when they first did it. They were essentially looking to increase the pore size so the membrane of each cell would let the magnesium get in.

I told you none of you have adequate levels of magnesium. What we have to do, we don't have a pump that shoots it in. You can swim in Epsom salts, I love it, you can do lots of stuff. You can be wealthy enough to see my doctor friends once a week and do a minor cocktail of magnesium once or twice a week. You can buy every form of magnesium that money would buy and that would include magnesium malate, magnesium trianate, magnesium taurate, magnesium aspartate, magnesium orotate. All I can tell you is that magnesium glycinate, so please don't be stingy with your money.

You're stuck. You are not going to reach a maximum intended useful lifespan without supplementation. What supplements you choose to be obviously are going to be somewhat based on what you learn. There's a book that is really good. It is called the Blood Sugar Solution by Mark Hyman and it's endorsed by Bill Clinton, his patient who was nearly dead when Bill Clinton decided to change his lifestyle and walk away from those golden arches and take the chance on living 100% organic vegetarian and start swallowing stuff.

In the book there's 10 questionnaires. One asks you did you ever work in a dry cleaning plant? Did you ever work around gas? It gets you thinking about what you've done in your life. Each one, you add up the number. You say, "My God, I didn't realize that. Did I have that much stress? Did I go through the divorce and then I lost Mom and then I lost Dad then we had the bankruptcy. Then the IRS came."

We forget what all these were. It kind of tells you what alpha-lipoic acid and omega-3, it gives you ... Then I don't have to sell you something. You sell yourself. You take your own questionnaire. You say my God. Then you look at what you can do to be tougher. Part of the trick is the test we have, there's a good book called Experimental Man by David Ewing Duncan. He was the guy that we chose for National Geographic when we first started doing the \$13,000 test I told on the children.

Well, we took him as a professor here at the University of California in San Francisco. We took this guy and he's 50 and we said, "Okay big guy, let's have you see the Chief of Internal Medicine at the university and tell us what ..." They said this guy is in great shape. We started doing weird tests. The first test was a \$13,000 one and he failed it terribly because he, like I, lives on airplanes.

You can't sit on that seat in the airplane. They want to protect you when an airplane crashes so it's coated with the flame retardant which are pure fraud. Flame retardant was never ever proven to be effective. They've done something interesting. They've tried to help with the overpopulation. When I got out of medical school the average man had 140 million sperm. Today they have 40 million. If they keep it up we'll get it down to 20 million. They've got the answer.

It was all fraud because they've been exposed. HBO has done a whole special telling you that the whole idea of flame retardant never did anything but increase the fire. Stuff like that. When you learn all this stuff you kind of get an idea that in order to fight back you're going to have to take a lot of responsibility for yourself. We have

brilliant doctors that we bring here to speak and a lot of them are [inaudible 01:02:50]. All of us have a piece of the puzzle. As the old thing is, the teacher appears when the pupil is ready. Tonight I'm hoping some of my message is ready for some of you. Yeah.

Speaker 6: Yes. When you previously talked about Fukushima, you mentioned Fukushima, you don't have to worry about something. Could you share ...

Dr. Gordon: Having been in radiology I had to sit there. When I x-ray your stomach and you come to me, the x-ray is there and it's going through your stomach and it's going right into my eyeball because I'm looking directly at the tube. I had to figure out how dangerous is my life because we know that guys lost their fingers when they play. We know it's not safe.

There's also an amazing effect I which there is amazing ability of the body to recover. Let's go to the movie that PBS has. They did a documentary on the wolves of Chernobyl. It's really weird. The wolves was never moved out. All mankind moved away. The wolves kept on having babies all radioactive, but they got sperm and they have babies. It's kind of weird.

There's a fish right there at Chernobyl that is the largest catfish that they've seen and it doesn't seem to have any problem. We do know that when we fried of pretty good scientists at the Atomic Energy Commission and this is moving away from Chernobyl. We're moving back to men working with the nuclear, with atomic energy. These guys wound up, by accident they got really fried. All their sperm went down to nothing.

You would assume that that wouldn't come back. Remember they've really been fried. The bag shows how much they got. Amazingly enough less than five years later the sperm count was coming back. Ten years later most of them had totally normal healthy babies. My thing is this, fear is useful in the following sentence: If I had every one of you tomorrow do the new EKG I told you about, I would find in this room 5 of you who are at tremendous risk of being dead within the next 3 years because you have undiagnosed coronary artery disease and you don't need these idiots with a treadmill, which is totally misleading, and you don't need these idiots with the angiogram because as soon as they do an angiogram they say, "You got here just in time. We've really got to operate tomorrow."

They're really good at selling their nonsense. When I empower you with a real test. The test, if I did all of you [inaudible 01:05:19], if all of you wrote a check out to the Purdue people that developed the new test, UncleBlot.com, 700 bucks, you might be very upset. I do a cheaper one. It's \$400. We do it CAProfile.net. I find cancer. If a third of us are going to have diagnosable cancer, that cancer is in your body for 7 or 8 years before. If I give you that wake up call that yeah, you're going into cancer, the laboratories tell me that none of you want to have the test done because they say what person in their right minds wants to be told they have cancer?

They just want to put it off and bury their head in the sand. Only with knowledge can I empower people to know that I can bring all the cancer tests back to normal. I can't do it without a little bit worried so you're not willing enough to make your body the priority. Okay? Fukushima, the real problem there is radioactive cesium. I don't have an easy answer to get it out.

Since I don't have an easy answer to make it go out my choice is if I can't get rid of one load you're going to carry, I'll get rid of all the other loads you're carrying. That's my power drink. I'm the expert at lowering all the other toxins so if you have to live with radioactive cesium ... It's interesting because the garlic company called [inaudible 01:06:36] is located 45 miles from the Hiroshima epicenter.

When I went there to work with them in electro all over Japan I was amazed that they never saw cancer in any of their employees because they paid them partly by letting them take their garlic. Of course now we did a study at USC that garlic alone can reverse coronary artery disease. It's kind of interesting to know that we have answers. Next question. Who is next? Yes.

Speaker 6: You talked about thyroid function is you're 50 years old, 97% compromising.

Dr. Gordon: About 96%.

Speaker 6: Okay. Could you expand on that? Have you been successful at reversing that?

Dr. Gordon: Yeah, what we're trying to do is we're trying to teach people that cancer is always been reversible in my practice when it's at the micro level. That's why I'm so excited that Purdue brought us out a test that picks it up when it's 2mm in size. Way below what we could otherwise get because those are so easy to reverse.

The nice thing about cancer is that when you spend you a little time on my website, I have done webinar after webinar on dementia, on autism, on Lyme, on cancer. I have all the slides which we didn't look at tonight because I prefer talking about it. I have 160 slides. I only showed you 40 of them. You've been spared 120 slides.

We would have been able to show you clearly what the whole picture is that we're fighting. As we have answers that's the exciting thing. Once we know what the enemy is we can win it. Who's got the next question? Yes.

Speaker 7: Can you tell us a little bit more about silver? Is it ionic? Is it colloidal?

Dr. Gordon: About which thing?

Speaker 7: The silver product? Is it just molecular?

Dr. Gordon: I'm glad you asked. Yeah, the thing is this. This product is the website results RNA is something that I helped co-develop because I really wanted them to bring my zeolite to the world. I could see they were very knowledgeable how to do products. We have

a liquid zeolite that we use for babies because the big problem is I'm going to have a healthy population I have to detox from the mother, the prospective mother looks at the prospective father I need to start the detoxing at that point.

Because every child is born, nature throws all the toxins into the baby. Now this silver took Darryl [inaudible 01:09:05] who has spent almost 230 years. He worked with Brigham Young University in Provo and they spent at this moment, in order to get to the point they're now used at the Harvard teaching hospital, to be used there they spent almost a million dollars in documentation. There's a lot of stuff that's in here proprietary. All the other companies want to know how did they do it?

Because normally silver is one that they release one electron. It's going to kill one enemy and it doesn't keep on repeating. That's why all of you may know we love alpha-lipoic acid because it recharges your C and E so they keep going back and forth. Well, they've turned this into a machine gun. Some of what they have done is so sophisticated. It's pretty easy to look at because the data, the companies right here, there's only two more sheets left since you were asking, I'll make sure that you get one of them. This will let you go to their website and see as much as they're willing to give out to the public is to how all this stuff works.

The silver that they did had to be able to ... Remember, I never bet my life on one product. Tonight I've told you that I use high dose vitamin C, high dose A, high dose vitamin D. Tonight I've introduced you to zeolite. The doctors don't understand there zeolite, my client, there's a little tiny place called Causeway. They live way over there in Kuala Lumpur. They only do 12 billion a year so they're big competitor is a little company called Amway.

They wanted a product because they saw [inaudible 01:10:37] coming in with the illegal GRAS. I have the only, there's only two zeolites that are really generally recognized as safe with documentation. We have documentation, but you don't need documentation to treat your horse and your dog. This is one chapter out of the handbook which comes from a little group called the American Chemical Society. These guys though you should know about zeolite.

The textbook is 250 bucks and most of you don't want to take 1,200 page text. When doctors call the office I let them have free of charge the chapter on human application with 110 references in here telling you all the things zeolite can do. When we play with silver and zeolite together we get magic. A lot of what we do is the delivery system is the water that we use. Water is a fascinating subject.

Tonight I've mentioned to you Kaqun water. We sell Kaqun water in 2,600 pharmacies in Europe. It sells for \$5 a bottle. Now it's \$15 a bottle to oyu in America. Why would people spend that much money? Why would pharmacies carry water? Because we've perfected how to have a deliberate oxygen to put the color back in your cheeks. I deliver hydrogen so the two of us are working out, he's the oxidation guy and I'm the reduction guy.

It's going to be a lot of fun when we figure out the chrono-biology, you need to take your reduction at 3:00 in the morning or do you need it at 3:00 in ... We'll be learning it. As I show you zeolite is able to act for external application and help draw in poison. It's a detoxicant, a vaccine [inaudible 01:12:15], antibacterial. In fact the Croatian government wanted me to try their zeolite. Their zeolite actually is proven to treat pancreatic and colon cancer without any question.

No dog has ever been who was taking it, the food grade which is cheap for the animals and if they did the zeolite each day, because most dogs wind up with cancer. What else could you get? The food that we give our animals is from animals that are fed the same poison food that we're afraid to eat. How can it come out better? Anyhow.

Speaker 3: We've got one more question.

Dr. Gordon: Yes.

Speaker 9: Yes Dr. Gordon, will sleeping on a negative mattress of Dr. Bonlie's help detoxify your body and bring more magnesium into your blood cells?

Dr. Gordon: Great question. Dr. Bonlie is my good friend living in Las Vegas. He's been the head of the North American Magnetic Research Society and yes, I have had his pad. I've been sleeping on his pad for only 15 years and I only spent \$3,600 to buy four pads. The pads each weigh 100 pounds. They're \$99 a pad and each pad gives you 10 Gauss. Because she wants to live a long time too I had to buy it for her side of the bed.

Anyhow. Anyhow with four pads it is documented to have a benefit, but it only slowed down how fast I was dying. It wasn't until I got ahold of this that I reversed and started going up. That's my message to you tonight. I've been a mess and now I'm optimistic as can be because things that haven't worked normally at this point in time I would have had say goodbye to you twice and I'd be in the bathroom because my bladder for 50 years has never let me go more than an hour. Every hour on the hour all night for 50 years I have to be in the bathroom.

It's nice to be regenerating my body. I have knees that I could wake up the neighbors if you gave me a mini trampoline, the noise would wake up the neighbors. I've been able to kind of regenerate a lot of the body.

Speaker 10: Dr. Gordon, can you please clarify [inaudible 01:14:14]?

Dr. Gordon: The Nikon people in Japan make a billion dollars a year in selling magnets. Magnets are generally good guides. Everybody needs to know that I'm trying to empower you to have at home a laser at all times so that if your kid has got a hot tooth you can take magnet that they sell you, [inaudible 01:14:41], the size of a thick fat quarter, 100 bucks. You take it and go north, south, north, south. You put a magnet over that hot tooth and it will calm down a little bit.

You go down to Office Max and you buy a little laser pointer and you stick that on the tooth and you've got a laser pointer and a magnet and the pain goes away and the kid doesn't need to see the dentist. You saved yourself 2 or \$3,000. I love the tricks, but there's a small problem. They have to sell stuff to people and people like to take it home. They can't sell the Bonlie pad because the Bonlie pad weighs 100 pounds.

You can't stack them so they've got to cheat. They sell you pads and they say it's magnetic pad because a magnet here and another one over here and another one here. Bonlie and all of us who know the body only is used to north seeking. You can't have if it's here and nothing here it's going to be north south. North south. The first day you put it on oh boy, this is wonderful because it stimulates your adrenal gland. Your adrenal gland says, "My God, what's gone wrong?" It's never had north south.

At the end of a month people who buy their pad are getting weak and sick. They're burning out their adrenal gland. It's a shame that people don't ... The devil is in the details. That's why I go to every meeting on every topic, I'm never home. I'm in some country. I don't care what ... I spent millions of dollars, what I'm sharing with you tonight.

Speaker 11: Right. First of all, I know a broad who worked with us, Dean Bonlie studied our magnetic beds in the '80s when we were using it. It was all one polarity.

Dr. Gordon: Yeah.

Speaker 11: Everything was so close to each other ...

Dr. Gordon: There's just a wall of magnets.

Speaker 11: Nikon came with fill pod one day and Nikon wanted to learn everything about magnets and we tried to explain to them it has to be one side only and the other side. Then you have to know how to ...

Dr. Gordon: One's north, one's south.

Speaker 11: They came back to me and they had positive, negative, positive, negative which altered the whole function. One other thing, we just sent about 50 tons of [cabosite 01:16:46]. Cabosite is the only thing that will pull out radioactive material in your body and in the water. My friend who doesn't want to be mentioned because he doesn't want the FDA to go after him, but he's owns the largest cabosite mining operation in the world. We did a study the last 10, 15 years on cabosite and zeolite together.

It's the only thing that actually pulled out radioactive material out of the body and out of the water. We're trying to bring it back, but they just bought every single material that he owns in Japan because they know how important it is to keep the ... It does pull out cesium like you said. It's the only material that does that. [inaudible 01:17:31] who's the Croatian guy that did all the study on zeolite has been a dear friend of

mine. He's also in the water project industry down in southern California. He's the one that taught me everything about zeolite 20 years ago. His studies are amazing.

Dr. Gordon: Thank you.

Speaker 3: Okay. We're going to take a break here in a second. One last announcement.

Speaker 1: Everybody here has access to Dr. Gordon's cards and you can talk to him, but there are a lot of people who watch our videos who aren't here, so Garry Gordon has two R's in his name. Those people who want to listen to Walter Wainwright about Haelan and cancer, I forgot to give you my website. It's Thriving Health and Wellness. I have cards here. Underneath the video interview of me there's two other presentations by Walter, all science.

Speaker 3: How about a good applause and thank you for Dr. Gordon. There's going to be a 10 minute break, 10 minute break and then we'll be back here. Dr. Melissa [inaudible 01:18:12] is going to tell us about biofilms. Good stuff. Ten minutes and come back to us.
